

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all the authors. There are no page charges.

### **Manuscript submission**

Authors should submit their manuscripts and their revised versions online at the following address:

[www.editorialmanager.com/alr](http://www.editorialmanager.com/alr)

Authors are invited to suggest the names of potential referees. Authors can submit a single .doc, pdf or rtf file with tables and figures embedded at the end of the paper.

### **Acceptance stage**

Publication will follow receipt of a signed copyright agreement form. A signed copy of the completed Colour Work Agreement Form must be returned to EDP Sciences before colour work can be processed. The author should provide the text in Latex format preferably. Word or RTF formats are also accepted. Figures may be provided in EPS, TIFF, Word format or PDF. Files of scanned line graphics can be accepted preferably at a resolution of 1000 dpi, for scanned halftones (300 dpi) and scanned line/tones (500 dpi). Colour illustrations should be scanned in at 300 dpi (500 dpi for combination of both colour/line tones).

### **Categories of contribution**

**Full Paper** – A full paper is a contribution describing original research, including theoretical exposition, extensive data and in-depth critical evaluation. Full papers should be approximately 5000–8000 words including abstract and references.

**Review Paper** – Only critical review papers will be considered. The format and length of review papers are more flexible than for a full paper.

**Prospective Note** – Theoretical research with a limited range of results, or critical evaluation, emerging new ideas and trends. The purpose of a prospective note is to inform readers of development in a subject area. Limited to 3000 words.

### **Manuscript preparation**

List all authors and their affiliations. The full mailing address of the corresponding author must be supplied along with E-mail address and Telephone (and eventual Fax) number(s). All pages of your manuscript including the title page, references, tables and illustrations must be

numbered and possess ample margins. Line numbering should be applied to each page of text. The preferred of a full paper is as follows: Paper title, Author's name(s), affiliation address(es), Abstract, Keywords, Introduction, Materials and methods, Results, Discussion, Conclusion, Acknowledgements (optional), References, Appendix (optional), Figure captions, Tables, Figures. Figures and tables can also be embedded directly into the text.

The abstract should not exceed 300 words and should summarize aims, methodology, results and the conclusions reached. Abbreviations should be avoided. Standard International units should be used throughout, e.g.  $\mu\text{g min}^{-1}$ . If references must be cited in the abstract, they should be as follows: (Suquet et al. 2014, *Aquat. Living Resour.* 27: 35-40).

Results and discussion must be presented in two different sections, so not mixed together in a "Results and Discussion" section.

## References

Journal titles should be abbreviated according to the List of Serial Title Word Abbreviations (ISO 4) published by the ISSN International Centre, 20 rue Bachaumont, F-75002 Paris. <http://www.issn.org>

References should be cited in the text, e.g. (Gruber and Stout 1983; Smith 1999; Martin et al. 2005), and listed in alphabetical order in the reference list.

Examples:

### *Journal articles*

Chae DR, Pascoe S. 2005. Use of simple bioeconomic models to estimate optimal effort levels in the Korean coastal flounder fisheries. *Aquat. Living Resour.* 18: 93-101.

### *Books*

Cressie NAC. 1993. Statistics for spatial data. Revised edition, New-York, Wiley. Wiley Series in Probability and Mathematical Statistics.

DeAngelis DL, Mooij WM, Basset A. 2003. The importance of spatial scale in the modeling of aquatic ecosystems. In: Seuront L, Strutton PG (Eds.), Handbook of scaling methods in aquatic ecology, London, CRC Press, pp. 383-400.

## Tables and figures

Tables should be numbered consecutively throughout (use Table 1, etc.). Each table must be accompanied by a caption written in the same font as the table text and situated directly above the table. Vertical lines should be avoided.

Illustrations should be numbered consecutively throughout (use Fig. 1, etc.). Plan your illustrations for a journal column width of 80 mm.

Colour illustrations may be published in the print version of the journal at the author's expense. Authors should notify the journal at the time of submission if they wish colour illustrations to accompany their article. Alternatively, illustrations may be published in the print copy in black and white format with a colour version appearing in the online version, free of charge.

Each table or illustration must be on a separate page and they should be placed at the end of the manuscript.

## **Electronic-only material**

Electronic-only material is designed to provide supplementary information which is either too voluminous for printing or is designed specifically for the Web, such as illustration in colour. Electronic-only material may include but is not restricted to:

- (Large) tables
- Images, video
- Appendices
- Programmes

For more information on the submission of this material, (file requirements, etc.), please contact the production office.

## **Proofs – Reprints – Offprints**

Proofs: PDF files, will be sent to the corresponding author only and should be returned to the Publisher within 48 hours of receipt.

The corresponding author will receive a PDF “reprint” of his or her article. Printed offprints can be supplied if ordered on the offprint form which accompanies the proofs.

The ALR journal strongly recommends the publication and citation of data used in the manuscript. Indeed, readers will then be able to check, or develop, a specific issue. It enhances the credibility and transparency of the study. Readers will also be able to use the data in their own work too. The Open Access of research data can make research progress more quickly and avoid redundancies for everyone's benefit.

The ALR journal recommends publishing the data in the Open Archive SEANOE (<http://www.seanoe.org>). Each dataset published in SEANOE has a DOI (Digital Object Identifier) that allows an accurate, reliable, and sustainable citation of the data.

Please contact [data@seanoe.org](mailto:data@seanoe.org) for more details.

If the dataset is available online, it can then be cited in the text specifically in a section « Data accessibility».

The dataset can be published before the submission of a publication with an embargo period to the data files until the publication is accepted. The dataset can also be made available after the acceptance of the publication. The citation of the dataset then needs to be included in the publication during the review.
